```
/**
 * chrat - retrieves the character at a given position in a string
 * @param x0: pointer to the string
 * @param x1: index of the character to retrieve
 * @return w0: the character at the specified position
 *
 * This function retrieves the character at the index specified by x1 in the
 * string pointed to by x0. If the index is out of bounds, the function returns
 * the null terminator.
 *
 * Registers used: x0, x1, x2, w0, w3
 * Registers saved: none
